

Eleganza 3

Hospital bed for acute care

Eleganza 3 – solutions through innovation

- PRODUCT VALUE
- PATIENT SAFETY
- PERFECTED ERGONOMICS
- PREVENTION OF HOSPITAL INFECTIONS

PRODUCT VALUE

Standard features such as in-bed scale, bed exit alarm and battery back up meet the future acute care demands at today's budget.

PATIENT SAFETY

Unique siderail design, bed exit alarm and low bed height improve patient safety.

The Eleganza 3 bed improves the treatment and recovery of patients while reducing the risk of potential injury and infections. The functional features are simple to use allowing the staff more time to deliver patient care. The affordable standard features are costly options on our competitors products.

PERFECTED ERGONOMICS

The Eleganza 3 is equipped with the revolutionary Ergoframe positioning system, which creates the optimum conditions for patient comfort and posture, while eliminating the negative effects of compression, shear and friction forces.

PREVENTION OF HOSPITAL INFECTIONS

is aided by the modular removable deck, sealed column design and therapy mattress options.

- Standard features such as in-bed scale, bed exit alarm, and battery back up meet the future acute care demands at today's budget

- Our patented sealed aluminum column design provides reliability and low cost of ownership to maintenance.

- The Mobi-Lift® mobilizing handle (with height adjustment button) integrated into the bed's mattress platform aids in early ambulation of the patient.

- The Ergoframe® design allows the mattress and bedframe to move in harmony which reduces patient movement and the need for patient repositioning

- The safety GO button enhances patient safety by preventing unintentional bed positioning. The GO button safely activates the bed controls for 3 minutes.

- The easily removable frame platform combined with the column construction offers fast and effective hygiene control to reduce hospital acquired infections.

- The minimum gap concept of the Eleganza 3 reduces the risk of a patient being caught and trapped between individual parts of the siderails.

- The Eleganza 3 has a one button cardiac chair function that moves the patient from full recline to a clinically correct upright cardiac chair position.
